PHONE MOVE

With this tutorial you can create body interaction using your iPhone!

It's possible thanks to TDLidar app, developed by Aristides Lintzeris (ARISTIDES.LAB). It transforms your iPhone into a real-time sensor hub by streaming depth video, body, face, and hand tracking, motion data, audio analysis, and live speech.

WHISPER !

ILLUSTRATION STEP BY STEP

On set, be creative! Walk around the crowd, and play with the phone and the public! Or stay static!

STEP BY STEP

On set, be creative! Walk around the crowd, and play with the phone and the public! Or stay static!

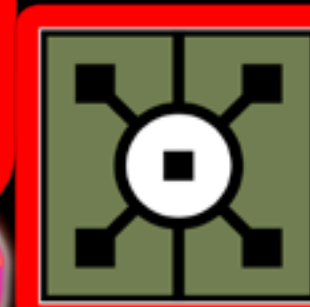

WHISPER

You need to use only with Local Wi-Fi, no cellular, no remote streaming!

It can work in the dark! LIDAR is active infrared, light-independent!
